Ask Questions →

What is New in Power Platform?

Discover the latest advancements in Power Platform and explore the future of app development. Stay updated with the newest features and announcements here.

Copilot for Power Apps

This feature allows makers and users to leverage AI to build apps and bring natural language to their own apps, making users more productive. It includes managing and overseeing AI agents in apps and directing users to the highest value tasks with in-app agents.

Learn more →

Streamlined Header and Navigation

Model-driven apps now have an updated interface with a simplified header and navigation layout. This change reduces visual clutter and makes it easier for users to find and access key functions, improving overall usability and navigation speed.

Learn more →

Smart Paste for Forms

Users can now paste data directly into forms, with automatic mapping to the correct fields. This feature saves time and reduces manual entry errors, especially when dealing with repetitive or bulk data input.
